Job Description (detail here):

Required Skills:-

- o Minimum 4 years architecting, designing and developing iOS Applications.
- o Experience in releasing multiple applications into the App Store.
- o Must have released at least one app participating from inception to launch.
- o Strong foundation in computer science, data structures, algorithms and software design.
- o Deep understanding of iOS Platform and associated tool chain.
- o Excellent knowledge of Swift 3/4, Objective-C, Xcode and Interface Builder.
- o Experience working with and tuning high volume mobile applications.
- o Experience integrating with RESTful API back ends

Role & Responsibilities:

- o Lead and mentor a team of iOS developers in conjunction with engineering management
- o Own technical responsibility for important pieces of the product that have high visibility both internally and externally
- o Architect and design features for iOS apps
- o Effectively communicate mobile application architecture and design to team and organization
- o Identify and evaluate internal / external technology (vendors, frameworks/APIs) to integrate with mobile applications
- o Estimate and size app features and modules
- o Prototype, develop, code, install, test and debug applications using appropriate tools as an individual contributor
- o Build applications in memory and network-constrained scenarios
- o Review and approve software design and code produced by team members
- o Represent the team in architectural and technical discussions with other engineering teams
- o Work closely with product managers, QA and technical leads from partner teams to define features and components of native mobile applications
- o Partner closely with our design and product team to architect gorgeous application flows that are intuitive for our users
- o Influence iOS development process for API creation, design, and product
- o Envision new products and features that are inspired, considered, and magical
- o Participate in the full SDLC (Agile), including meetings, iterative development, estimations and design sessions
